PERSONAL PORTFOLIO WEBSITE

Project Documentation

1. Project overview

The Personal Portfolio Website is a single-page website created to introduce Shaik Nagurbaba and present academic details, technical skills, interests, projects, achievements, resume-request information, and contact details. The page is titled “Personal Portafolio” in the supplied HTML file. It uses a dark background with white text and blue/cyan accents.

The website is intended to act as a personal introduction and a place where visitors can quickly browse the student's background and work. Its content is arranged vertically in one HTML document, with navigation links that jump to different sections of the same page.

2. Features and interactions

- **Navigation menu:** Links to Home, About, Education, Skills, Hobbies, Projects, Achievements, Resume, and Contact. Each link jumps to an element with the matching section ID.
- **Home section:** Introduces the student, includes a short description, provides a “View My Projects” button, and displays the Hachiman.png image.
- **Profile section:** Contains a short personal introduction and the goal of becoming a software developer.
- **Education cards:** Displays B.Tech in Computer Science, Intermediate (MPC), and SSC details in separate cards.
- **Skills cards:** Lists Python, HTML, CSS, and Generative AI, each marked as Beginner.
- **Hobbies cards:** Shows interests including anime, manga, manhwa, listening to songs, and watching movies.
- **Projects section:** Presents three projects—Festivals, Family Tree, and AnimeAura—with buttons linking to their GitHub repositories.
- **Achievements section:** Lists the web development course, Intermediate score, coding competition participation, and Python competition prize stated in the page.
- **Resume section:** Shows a short resume summary and a button using a mailto link to request the resume by email.
- **Contact form:** Provides name, email, and message fields. The fields are marked required, and the email input uses the browser's email input type.
- **CSS hover effects:** Navigation links gain an underline; cards change border color and move slightly upward; the main button also moves upward on hover.
- **Footer:** Displays the portfolio owner's name, class/group label, and year.

3. How it was developed

- **HTML page structure:** The document begins with the HTML doctype and contains a head section for the page title and internal CSS, followed by a body containing the visible portfolio content.
- **Content organization:** HTML elements such as nav, section, h1/h2/h3, p, ul/li, a, button, img, form, label, input, textarea, and footer are used to organize the page.
- **Section navigation:** IDs such as home, about, education, skills, hobbies, projects, achievements, resume, and contact are assigned to page elements. Navigation links use matching fragment URLs, such as #projects.
- **CSS design:** The internal stylesheet sets the black background, white text, blue and cyan accents, font family, margins, padding, borders, rounded corners, and button appearance.
- **Flexbox layout:** display:flex is used for the navigation and several groups of content cards. Gap, alignment, and justification properties control the spacing and placement.

- **Reusable classes:** Classes such as .heading, .box, .card, and .btn apply consistent styling to repeated elements across the page.
- **Interaction styling:** CSS :hover selectors and transition properties provide visual feedback when visitors point at navigation links, cards, and buttons. Input focus styles highlight the active form field.
- **Adding links and image:** The hero image is referenced using the relative filename Hachiman.png. Project buttons link to GitHub, while the resume request link uses the mailto scheme.

The submitted page uses HTML and CSS. No JavaScript code, backend service, or database is included in the supplied Personal.html file.

4. Current limitations and accurate behavior

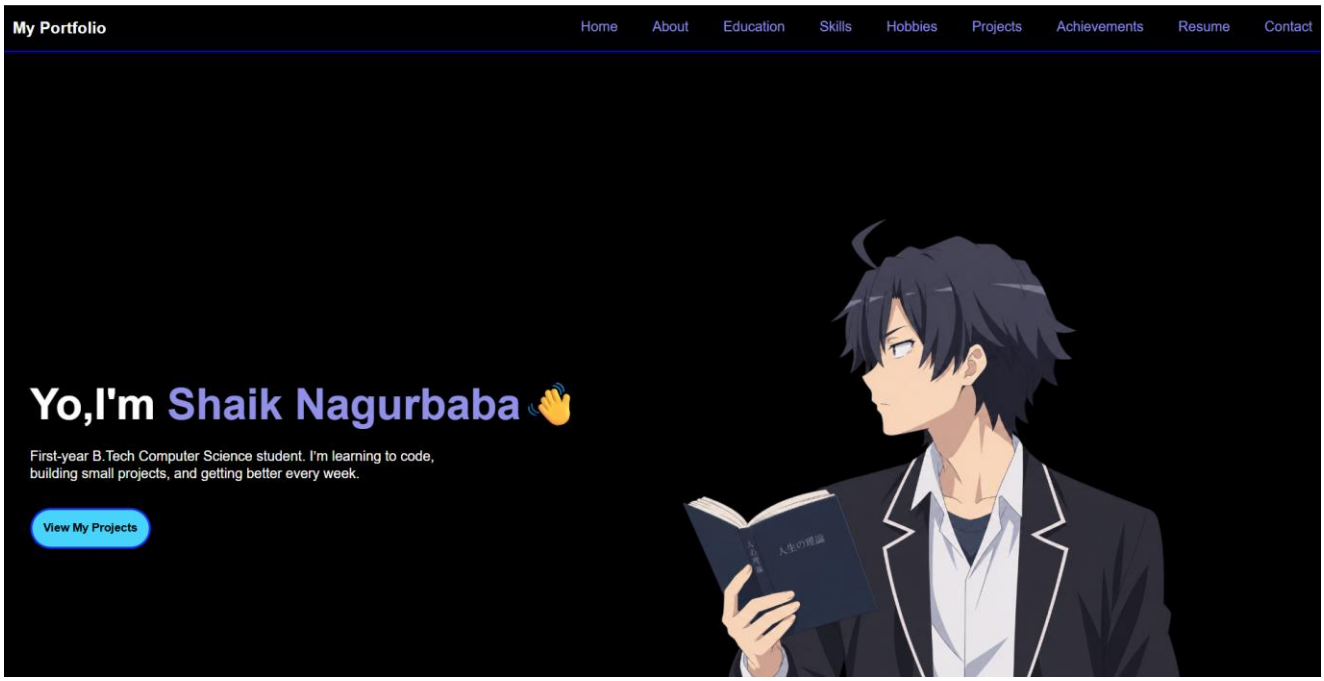

- **Contact form does not send messages by itself:** The form contains required fields and method="post", but the supplied HTML does not specify an action URL, JavaScript submit handler, or server endpoint. Browser validation can check required fields and email formatting, but message delivery is not implemented in this file.
- **Resume is requested by email, not downloaded:** The resume button opens a mailto link addressed to the email shown in the HTML. No downloadable resume document is linked in the supplied source.
- **No responsive media queries:** The CSS does not include media queries. Fixed widths and horizontal Flexbox card rows may need additional styling to display comfortably on smaller screens.
- **Local image dependency:** Hachiman.png must be available at the relative path used by the HTML file. If the image is moved or renamed, the image path must be updated.
- **Static content:** The portfolio text and cards are written directly in HTML. There is no database, login system, content management system, or dynamic content update mechanism in the supplied file.
- **External project links:** The GitHub project buttons navigate to external websites and therefore require an internet connection to open those repositories.

Possible future improvements

A future version could connect the contact form to a backend or form-processing service, add a real downloadable resume file, and introduce responsive CSS breakpoints for phones and tablets. These would be additional development tasks; they are not features of the currently supplied HTML file.

Prepared from the uploaded Personal.html source and its referenced Hachiman.png asset. This document contains only the four requested sections.

Yo,I'm Shaik Nagurbaba
First-year B.Tech Computer Science student. I'm learning to code, building small projects, and getting better every week.
View My Projects

Profile
I started coding this year and fell in love with turning ideas into working programs. I enjoy solving puzzles, learning new tools. My goal is to become a software developer and build apps that Satisfy Me .
Education
2026 - Present
B.Tech in Computer Science
Dr.Rvr NRI DTBU . Currenty in Year-1 and Sem-1
2024 - 2026
Intermediate(MPC)
Sri Srinivasa Graviity Jr. Colleger
2023
SSC
Navodaya E.M High School
My Skills

My Skills

Python
Learning programming logic, conditions, loops, functions, and problem-solving.

- Beginner

HTML
Building web pages using semantic tags, forms, tables, links, images, and lists.

- Beginner

CSS
Styling web pages with colors, typography, borders, spacing, Flexbox layouts, and hover effects.

- Beginner

Generative AI
Learning prompt engineering, AI tools, LLMs, and how to use AI to solve problems.

- Beginner

My Hobbies

Watching Anime
Enjoy watching anime and exploring different stories and characters.

Reaading Manga
Love reading Japanese manga and discovering unique storylines.

Reading Manhwa
Enjoy exploring Korean manhwa and webtoon adventures.

Listening songs
Enjoy listening to music while coding and during my free time to stay relaxed, focused, and refreshed.

Watching Movies
njoy watching movies across different genres and discovering new stories.

Projects

Festivals.html
A simple and colorful webpage created using HTML and CSS to showcase the rich culture, traditions, and festivals of India.

Click here to see the project

Family_Tree.html
A simple webpage created using HTML and CSS to represent family relationships in a clear, organized tree structure.

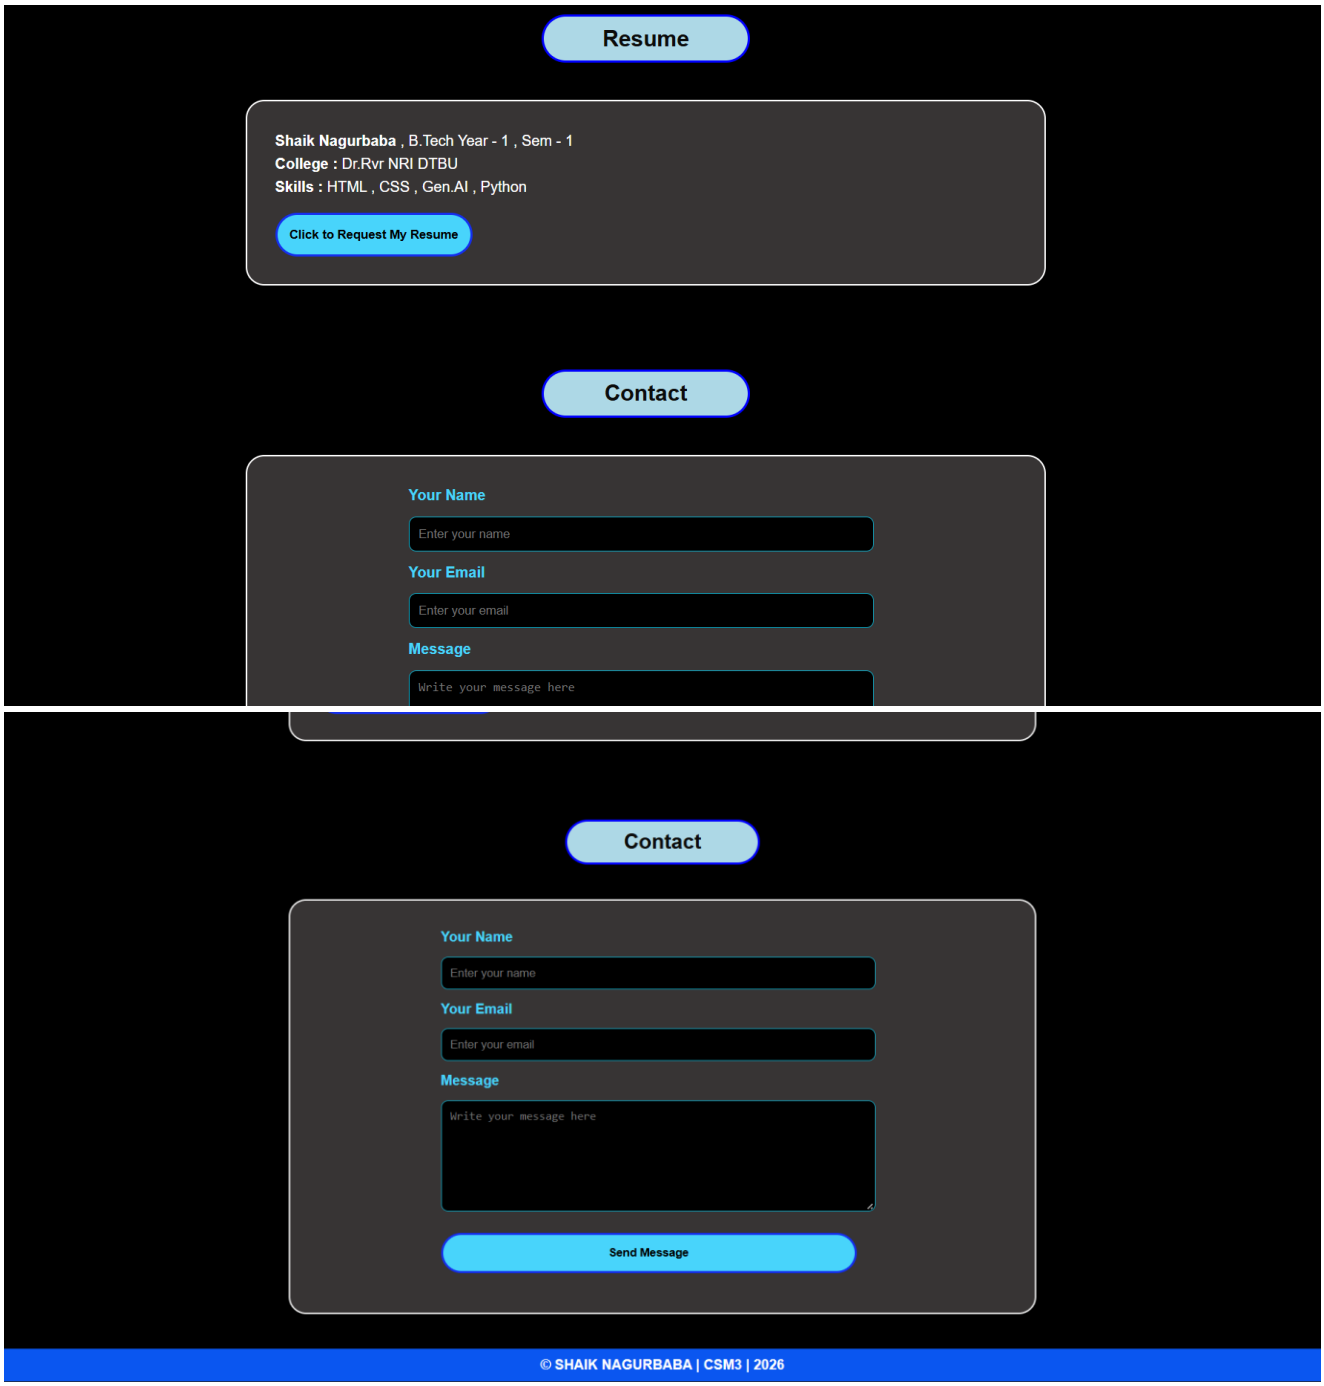

Click here to see the project

AnimeAura.html
A fan-made anime website built with HTML and CSS, showcasing popular anime series through an attractive and organized layout.

Click here to see the project

Achievements

- Completed “Web Development Fundamentals” online course (certificate).
- Scored 95.6% in Intermediate.
- Participated in my college’s coding Competition.
- Got second prize in Python Competition Held ny NRI DTBU

6. Code
